Topic / Chapter

Separation distances for wind turbines
Question no. 26e

Comments

Turbines are already becoming higher& if this is to be the case then a 2KM separation is nowhere sufficient. In my opinion 2 Km should be used for the smallest of turbines & then proportionately larger for the higher turbines if these abortions are to be forced upon us.The proliferation of these monstrosities means that it is ever more important to regard separation distances more closely.
It will not be long before we are able to take-off vertically as a country!

Question no.
